Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled "Million Hearts Hypertension Control Champions Challenge" to the Office of Management and Budget (OMB) for review and approval. CDC previously published a "Proposed Data Collection Submitted for Public Comment and Recommendations" notice on December 21, 2021 to obtain comments from the public and affected agencies. CDC did not receive comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

- (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

- (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- (c) Enhance the quality, utility, and clarity of the information to be collected;
- (d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and
- (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review - Open for Public Comments" or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street, NW, Washington, DC 20503 or by fax to (202) 395-5806. Provide written comments within 30 days of notice publication.

Proposed Project

Million Hearts Hypertension Control Champions Challenge (OMB Control No. 0929-0976, Exp. 11/30/2022) - Extension - National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Cardiovascular disease is a leading cause of death for men and women in the United States, among the most costly health problems facing our nation today, and among the most preventable. Heart disease and stroke also contribute significantly to disability. High blood pressure, also known as hypertension, is one of the leading causes of heart disease and stroke. Currently, about 78 million American adults have high blood pressure but only about half (48%) have adequately controlled blood pressure. The costs of hypertension are estimated at \$48.9 billion annually in direct medical costs.

In September 2011, CDC launched the Million Hearts initiative to prevent one million heart attacks and strokes by 2017. In February 2022, CDC launched Million Hearts 2027 to continue to prevent one million heart attacks, strokes, and related health conditions. In order to achieve this goal, at least 10 million more Americans must have their blood pressure under control. Million Hearts is working to reach this goal through the promotion of clinical practices that are effective

in increasing blood pressure control among patient populations. There is scientific evidence that provides general guidance on the types of system-based changes to clinical practice that can improve patient blood pressure control, but additional information is needed to fully understand implementation practices so that they can be shared and promoted.

In 2013, CDC launched the Million Hearts Hypertension Control Challenge, authorized by Public Law 111-358, the America Creating Opportunities to Meaningfully Promote Excellence in Technology, Education and Science Reauthorization Act of 2010 (COMPETES Act). The Challenge is designed to help CDC: (1) identify clinical practices and health systems that have been successful in achieving high rates of hypertension control; and (2) develop models for dissemination. The Challenge is open to single practice providers, group practice providers, and healthcare systems. Providers whose hypertensive population achieves exemplary levels of hypertension control are recognized as Million Hearts Hypertension Control Champions.

Interested clinicians or practices complete a web-based application form which collects the minimum amount of data needed to demonstrate hypertension control among their adult patients, including: (a) Two point-in-time measures of the clinical hypertension control rate for the patient population; (b) the size of the clinic population served; (c) a brief description of the characteristics of the patient population served and geographic location; and (d) a description of the

sustainable systems and strategies adopted to achieve and maintain hypertension control rates. CDC scientists or contractors review each application form and rank applications by reported hypertension control rate.

In the second phase of assessment, applicants with the highest preliminary scores are asked to participate in a two-hour data verification and validation process. The applicant reviews the application form with a reviewer, describes how information was obtained from the providers' (or practices') electronic records, chart reviews, or other sources, and reviews the methodology used to calculate the reported hypertension control rate. Data verification and validation is conducted to ensure that all applicants meet eligibility criteria and assure accuracy of their reported hypertension control rate according to a standardized method. Applicants must have achieved a hypertension control rate of at least 80% among their adult patients aged 18-85 years with hypertension.

Up to 35 finalists who pass the data verification and background check are selected as Champions. Several Champions participate in a one-hour, semi-structured interview and provide detailed information about the patient population served, the geographic region served, and the strategies employed by the practice or health system to achieve exemplary rates of hypertension control, including barriers and facilitators for those strategies. Based on the information collected for Challenges in 2013 through 2020, CDC recognized a total of 133

public and private health care practices and systems as Million Hearts Hypertension Control Champions. The Champions are announced roughly annually, approximately six months after the Challenge application period ends.

CDC plans to conduct the Million Hearts Hypertension Control Challenge annually through 2027. The 2023 Challenge is planned to launch in February 2023, coinciding with American Heart Month. The application period will be open for approximately 45-60 days, with recognition of the 2023 Champions in the fall of 2023. A similar calendar year schedule is planned for 2024 and 2025.

CDC will use the information collected through the Million Hearts Hypertension Control Challenge to increase widespread attention to hypertension at the clinical practice level, improve understanding of successful and sustainable implementation strategies at the practice or health system level, bring visibility to organizations that invest in hypertension control, and motivate individual practices to strengthen their hypertension control efforts. Information collected through the Million Hearts Hypertension Control Challenge will link success in clinical outcomes of hypertension control with information about strategies that can be used to achieve similar favorable outcomes so that the strategies can be replicated by other providers and health care systems.

CDC requests OMB approval for an estimated 215 annual burden hours. Participation is voluntary, and there are no costs to the respondents other than their time to participate.

Estimated Annualized Burden Hours

Type of Respondents	Form Name	Number of Respondents	Number of Responses per Respondent	Average Burden per Response (in hours)
Clinicians, practices, and healthcare systems	Million Hearts Hypertension Control Champion Application Form	200	1	30/60
Finalists	Data Verification Form	40	1	2
Champions	Semi-structured Interview Guide	35	1	1
